

# APEX

## *Frequently Asked Questions*

**As part of our 2025 quest for excellence we are looking at areas and products that can be improved, and the first project to be undertaken is re-designing the popular Brava bench. Small changes developed into big changes to the point that this is a completely new product and deserves a new name to match. Introducing, Apex...**

### **WHAT IS THE DIFFERENCE BETWEEN APEX AND BRAVA?**

The project began with the idea of taking the popular Brava range and making a series of enhancements to result in the highest quality product. After months of fine-tuning, we saw the end result and believed that the Apex deserved to stand on its own with a fresh name and identity.

### **IS THE BRAVA RANGE BEING DISCONTINUED?**

We believe the Apex is a perfect upgrade from the Brava, as such the Brava will not be available to order from March 2027.

### **CAN I STILL ORDER MATCH UPS FOR MY EXISTING BRAVA PRODUCTS?**

Yes, however only if physically attaching onto an existing desk eg extending a 4 person bench with an add-on. For any orders where the bench is simply in the same area, the new Apex is aesthetically similar enough (the biggest visual difference is the floating top is now only 15mm instead of 30mm).

### **WHEN CAN I ORDER THE APEX?**

Apex can be ordered from Monday 3<sup>rd</sup> March, with delivery starting from mid-March 2025. You can also register your interest ahead of the release date to receive updates.

### **WHAT CHANGES HAVE BEEN MADE?**

- In addition to the 600mm and 800mm depths, 700mm has also been added into the range
- As well as goalpost legs, we are now offering A frame, loop leg and loop leg with infills
- No more plastic bungs - the shadow gap has been reduced to only 15mm and also introduced to all panels, tops and frame to create a well-balanced bench
- Redeveloped beam brackets significantly improve frame stability
- Introducing the future of Hawk: our innovative **One Bolt System**. The Apex uses a single commonly-available bolt type throughout to streamline the fitting process, used for the frames, tops and all accessories
- The modesty panel bracket has been redeveloped to include keyhole openings for quicker assembly
- Tops are adjustable (15mm per top) to create either a 15mm aesthetic gap between tops up to 30mm for attachment of screens
- All wood screws have been replaced with metal-to-metal fixings for strength and quality
- Redesigned reversible cable trays - now out of 2mm thick steel for incredible strength
- All leg styles now come with feet already fitted for ease and speed of installation
